

Deepanshu Yadav

Full Stack — AI & ML Developer

9992505628 | d2810201@gmail.com | linkedin.com/in/deepanshuyaadav/ | [github/deepanshu5628](https://github.com/deepanshu5628)

Technical Skills

Frontend: React, TypeScript, Redux, Tailwind

Backend: .NET Core, Node.js, FastAPI, Express, Authentication / JWT, Middleware, Error handling, Logging

Database: SQL, MongoDB, VectorDB

Cloud & Tools: Azure DataBricks, Git, Postman, Swagger

Agentic AI: Langchain, LangGraph, RAG, MCP Server,

Machine Learning: Feature Engineering, Model Training, Hyperparameter Tuning, Scikit-learn, Pipelines

AI & LLM: Deep Learning, Transformers, Ollama, Groq, HuggingFace

Languages: JavaScript, TypeScript, Python, C#

Professional Summary

Full-stack developer with 1.2+ years of experience delivering production-grade applications in HRMS and logistics domains, with strong expertise in building scalable systems and integrating AI/ML-driven solutions. Hands-on experience in developing and deploying agentic workflows, RAG-based applications, and predictive machine learning models, with a focus on real-world use cases, system integration, and performance. Skilled in React, TypeScript, Node.js, .NET Core, Machine Learning and modern AI frameworks to build reliable, end-to-end intelligent applications.

Experience

DevStringX Technologies

Software Developer

Jan 2025 – Present

Noida, UP

J&R Transport Inc — Canadian Client (Logistics Platform)

Logistic Domain — Machine Learning, Langchain, LangGraph, RAG, VectorDB, Agentic AI

- * Designed and delivered a production-grade parcel delivery platform leveraging Agentic AI and Machine Learning for intelligent decision-making and real-time price prediction.
- * Developed and optimized a machine learning pipeline using an ensemble-based regression approach, incorporating feature engineering, encoding, hyperparameter tuning, and pre-pruning for robust price prediction
- * Implemented a LangGraph-based chatbot with RAG within the application to provide real-time parcel information and user support.
- * Designed and orchestrated a multi-step agentic workflow using LangGraph, enabling seamless interaction between decision-making agents and a RAG-based chatbot to deliver context-aware insights.
- * Developed an agentic AI pipeline leveraging Tavily and LLM-driven reasoning to evaluate delivery partners based on reliability, cost, and service quality.
- * Deployed scalable backend services using FastAPI and Pydantic, ensuring robust APIs, validation, and production reliability.

Metafora RPM — US Client (Logistics Platform)

Logistic Domain — React+TypeScript, Tailwind, Redux, Asp.Net Core, EF CORE, SSMS

- * Interacted directly with US client to understand requirements, clarify workflows and deliver feature updates
- * Built shipment and order management modules using React + TypeScript with reusable components and role-based screens
- * Developed REST APIs using ASP.NET Core Web API for load, stop, and status workflow management
- * Designed and queried relational data in SQL Server using Entity Framework Core optimized LINQ queries
- * Implemented filtering, pagination and search for large shipment datasets to improve usability
- * Integrated frontend with backend services and debugged end-to-end issues across UI, API and database layers
- * Optimized API response time and reduced UI re-renders, improving dashboard performance
- * Handled production bug fixes related to order status, load updates and data inconsistencies

CloveHR — In-house HRMS Product

Humar Resource Management SAAS Application — React ,Redux,Node,Express,SQL,Tailwind

- * Developed and maintained production modules across frontend and backend of HRMS platform
- * Built Payroll module including salary structure, deductions, attendance mapping and payslip generation
- * Implemented Training module with employee enrollment, scheduling and progress tracking
- * Designed and consumed REST APIs using Node.js + Express integrated with SQL database
- * Created dynamic dashboards and forms using React with optimized state handling
- * Implemented validations and business rules for HR workflows (leave, payroll processing, employee records)
- * Fixed production issues and handled data corrections directly in live environment
- * Delivered features end-to-end from requirement discussion to production release

Education

Ganga Institute of Technology And Management

Master Of Computer Application

Jhajjar, Haryana

Aug. 2023 – July 2025

Government Post Graduate Nehru College

Bachelor Of Computer Application

Jhajjar, Haryana

July. 2020 – July 2023
